

HydroSeal Dual Retrievable Packer

Retrievable Packers & Accessories

The HydroSeal Dual Retrievable Packer is a high performance hydraulic set, dual string, and double grip production packer. This packer is utilized for most dual zone production or injection applications. The HydroSeal Dual Retrievable Packer can run as the upper packer where the bottom packer normally is a single string seal bore packer, or in tandem dual completions that require selective setting. The wellhead can be installed and flanged up before setting the packer.

Features

- No tubing movement during the setting sequence
- Can be used in conjunction with packer penetrators for ESP installations
- Sequential upper slip releasing system reduces the releasing force
- Long string set
- Optional short string set
- Straight pull release
- Variety of tubing connections and anchor seal assemblies are available for the short string
- Multiple piece packing element system
- May be used for tandem packer installations
- Selective set
- Economical

Operation

Run as per WELLFIRST supervision.
